DETAILED ACTION

Allowable Subject Matter

1. Claims 37-44, 46-65 and 67-70 allowed.

Claim Rejections - 35 USC § 103

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 45 and 66 rejected under 35 U.S.C. 103(a) as being unpatentable over Ma et al. (6,060,755) in view of Kaushik et al. (6,184,072).

Regarding Claims 45 and 66, Ma et al. disclose an aluminum-doped zirconium dielectric film transistor structure and deposition method for same where in Figs. 12 and 13, it is disclosed gate insulating film 56/62 formed on a substrate 52, gate electrode 58 formed on the gate insulating film, the gate insulating film comprising a high dielectric constant film 56 and a lower barrier film 62 containing silicon oxynitride. Ma et al. fail to disclose the required high dielectric constant film of metal, oxygen and silicon combination. However, Kaushik et al. disclose a process for forming a high-k gate dielectric where in Figs. 5 and 6, the layer 18 is high dielectric constant film with silicon oxygen and metal combination.

It would have been obvious to one of having ordinary skill in the art at the time the invention was made to include the required high dielectric constant film in Ma et al. as taught by Kaushik et al. in order to have a lower thickness/higher quality gate
